

## I. Lo-fi Rough Sketch

## II. Hi-fi Prototype Screen (Figma)

For the hi-fi prototype screen on Figma, I added a “back to shopping” button for quick access to the products page. I also added a few other small details, like the “\*In-store pick up

only” text and the bag quantity number in the top corner for added realism. I made dropdowns for the quantity and glazing in order to give the user a choice to modify their order information if they chose to before they check out.
